Summary

In examining health disparities that exist within a population, the John D. and Catherine T. MacArthur Foundation Research Network on Socioeconomic Status and Health¹ used the metaphor of a ladder to describe not only access to health care, but also whether or not “good health” was within reach for a population.

Rungs on the ladder depict the resources needed to live life healthy, well, and secure. Education, comfortable housing, social and familial networks, income, and employment place many people in higher positions. Conversely, others experience generational poverty, extended periods of unemployment, poor education, low wages, and substandard housing. In using this data, it was important to remember that health disparities were not solely the result of genetic determinants, but of socioeconomic determinants directly impacting the health status of a population. As inequities were addressed through better social policies, the ladder to better health outcomes will be less steep, and more rungs within grasp, as more people experience greater access to education, improved income, access to employment, housing, etc.

Please see the following key findings of this report.

- The Hispanic population of Congressional District 3 had the lowest median age of every race and ethnicity with a median age of 23.1, while the median age for non-Hispanic Whites was the highest at 43 years.
- Non-Hispanic Whites (55.9%) had the highest percentage of households with a married couple family while only 24.7% of African American households contain a married couple family.
- Non-Hispanic Whites had the lowest proportion of the population with less than a high school education (about 9% for male and about 8% for female) among all racial and ethnic groups. Hispanics had the highest population who had less than a high school education (about 53% for males and 48% for females).
- The largest disparity in median family income was between American Indians at \$31,267 and non-Hispanic Whites at \$54,695, almost 2 times higher.
- There was an employment disparity between American Indian males (31%) and non-Hispanic White males (13%) not in the labor force; and African American females (43%) compared to non-Hispanic White females (21%) who were not in the labor force.
- Nebraska’s minority households had a smaller proportion of the population who lived in owner-occupied homes than non-Hispanic Whites.
- Non-Hispanic Whites had the highest percentage (76.6%) of those who were born in Nebraska at the time they were surveyed. Non-Hispanic Whites were almost 4 times more likely to be born in their state of residence than Asians. Asians had the highest percentage of those who were foreign-born (73.2%).
- More than twice as many people reported entering the United States after 1990 as they did before 1990. About 35% of those who entered the U.S. reported they entered between 1990 and 1999, while only about 17% said they entered between 1980 and 1989.

Introduction

This report presents a portrait of the minority populations in Nebraska Congressional District 3 (CD 3) and provides critical information on demographic, social, economic, and housing characteristics. This data represents a population in time. While the population itself may experience statistically significant growth overall, often the various components of socioeconomic status do not.

Snapshot of the Minority Population in Nebraska

Nebraska continues to become more racially and ethnically diverse. In 2010, the population of Nebraska was 1,826,341.² Minorities represented 17.9% of the total population in 2010; Hispanics were the largest minority group at 9.2% of the state population and African Americans were the second-largest minority group at 4.5% of the state population, followed by Asians at 1.8% and American Indian or Alaska Natives at 1%. The minority population in Nebraska has been increasing much more rapidly than the non-Hispanic (NH) White population. According to the U.S. Census Bureau, from 2000 to 2010, Nebraska's racial and ethnic minority population grew from 216,769 to 326,588, a 50.7% increase. During this same period the non-Hispanic White population increased by only 0.4%.³

²U.S. Census Bureau, 2010 Census.

³U.S. Census Bureau, 2010 Census.

Nebraska has a rapidly growing minority population comprised increasingly of persons of Hispanic/Latino origin. Hispanics are the fastest-growing minority group in Nebraska. The Hispanic/Latino population increased from 36,969 in 1990 to 94,425 in 2000, to 167,405 in the year 2010. These numbers represented a 353% increase for the Hispanic population in the state between 1990 and 2010, a 155% increase between 1990 and 2000, and a 77% increase between 2000 and 2010. In 1990, the population of Nebraska was 1,578,385, and of that number, the Hispanic/Latino population accounted for 2.3%. In 2000, the population of Nebraska was 1,711,263 and the Hispanic population accounted for 5.5%. In 2010, the population of Nebraska had risen to 1,826,341 and the Hispanic/Latino population accounted for 9% of the total Nebraska population. A detailed summary is provided in the following table.

Table 1: Nebraska's Population by Race and Ethnicity: 2000-2010

Race/Ethnicity	Population Apr.1,2000	% Population (2000)	Population Jul.1,2010	% Population (2010)	Change (00-10)	% Change (00-10)
Nebraska Total	1,711,263		1,826,341		15,078	6.7
White	1,533,261	89.6	1,572,838	86.1	39,577	2.6

Source: U.S. Census Bureau, 2010 Census, 2000 Census.

*NHPI: Native Hawaiian or Other Pacific Islander.

** includes Alaska native

According to the U.S. Census Bureau, in Congressional District 3⁴, the Hispanic population accounted for 9.8% of the population, compared to the state at 9.1%. One percent of the total 561,378 people in CD 3 were American Indian (including Alaska native), which was the same proportion as the state population. The non-Hispanic White population in CD 3 (87.2%) saw an almost identical proportion as the state population (87.3%) as well. However, 4.5% of the state's population was African American, only .7% of the CD 3 population was African American.

Table 2: Congressional District 3 Population by Race and Ethnicity: 2010

Population	Number	Percent
CD3 population	561,378	100.0
White	515,148	91.8
American Indian**	5,642	1.0
African American	4,053	0.7
Asian	3,486	0.6
NHPI*	352	0.1
Hispanic	55,090	9.8
Non-Hispanic White	489,443	87.2

Note: These populations are based on congressional district boundaries defined by the 111th Congress.

*NHPI: Native Hawaiian or Other Pacific Islander.

** includes Alaska native

⁴ These population numbers were taken before new congressional district boundaries were marked.

Race and Ethnicity in the United States Census

Race and ethnicity in the United States Census was defined by the United States Census Bureau and the Federal Office of Management and Budget (OMB), as self-identification data in which residents choose the race or races with which they most closely identify, and indicate whether or not they were of Hispanic or Latino origin (ethnicity).

The racial classifications used by the census bureau adhere to the October 30, 1997 Federal Register Notice entitled "Revisions to the Standards for the Classification of Federal Data on Race and Ethnicity" issued by the OMB⁵. The OMB requires five minimum categories (White, Black/African American, American Indian and Alaska Native, Asian, and Native Hawaiian or Other Pacific Islander) for race. The race categories were described below with a sixth category, "some other race," added with OMB approval. In addition to the five race groups, OMB also states that respondents should be offered the option of selecting one or more races. The following definitions were provided by OMB and the U.S. Census Bureau to identify race.⁶

White. A person having origins from any of the original peoples of Europe, the Middle East, or North Africa was classified as white. It includes people who indicate their race as "White" or report entries such as "Irish," "German," "Italian," "Lebanese," "Near Easterner," "Arab," or "Polish."

Black or African American. A person having origins in any of the Black racial groups of Africa. It includes people who indicate their race as "Black," "African American," or "Negro," or provide written entries such as "African American," "Afro American," "Kenyan," "Nigerian," or "Haitian."

American Indian and Alaska Native. A person having origins in any of the original peoples of North and South America (including Central America) and who maintain tribal affiliation or community attachment.

Asian. A person having origins in any of the original peoples of the Far East, Southeast Asia, or the Indian subcontinent including, Cambodia, China, India, Japan, Korea, Malaysia, Pakistan, the Philippine Islands, Thailand, and Vietnam. It includes "Asian Indian," "Chinese," "Filipino," "Korean," "Japanese," "Vietnamese," and "Other Asian."

Native Hawaiian or Other Pacific Islander. A person having origins in any of the original peoples of Hawaii, Guam, Samoa, or other Pacific Islands. It includes people who indicate their race as "Native Hawaiian," "Guamanian," or "Chamorro," "Samoan," and "Other Pacific Islander."

Some other race. Includes all other responses not included in the "White," "Black or African American," "American Indian and Alaska Native," "Asian," and "Native Hawaiian or Other Pacific Islander"

⁶<http://www.whitehouse.gov/omb/fedreg/ombdir15.html>

2000 Census of Population, Public Law 94-171 Redistricting Data
File: Race. U.S. Census Bureau.

race categories described above. Respondents providing write-in entries such as multi-racial, mixed, inter-racial, or a Hispanic/Latino group (for example, “Mexican,” Puerto Rican” or “Cuban”) in the “Some other race” write-in space were included in this category. Estimates for years after 2000 reflect an allocation of this category among the other categories.

Two or more races. People may have chosen to provide two or more races either by checking two or more race response check boxes, by providing multiple write-in responses, or by some combination of check boxes and write-in responses.

Race and ethnicity were considered separate and distinct identities, with Hispanic origin asked as a separate question. In addition to their race or races,

all respondents were categorized by membership in one of two ethnicities: Hispanic or Latino, and non-Hispanic or Latino. Percentages for the various race categories add up to 100% and should not be combined with the Hispanic percentage.

Hispanic or Latino. A person having origins in any of the original peoples of Cuba, Mexico, Puerto Rico, South or Central America or other Spanish culture or origin regardless of race. People who identify their origin as “Spanish,” “Hispanic” or “Latino” may be of any race.

Non-Hispanic White. They are individuals who responded “No, not Spanish/Hispanic/Latino” and who reported “White” as their only entry in the race question

Data Source

The findings presented in this report were based on the American Community Survey (ACS) sample interviewed between 2005 and 2009. The populations in this report are based on congressional district boundaries defined by the 111th Congress. The ACS is a large, continuous demographic survey conducted by the census bureau that provides up-to-date profiles of America's communities. The survey produces yearly demographic, social, economic, and housing data that is comparable across states, communities, and population groups. The ACS replaced the decennial census long form in 2010 and thereafter by collecting long-form-type information throughout the decade rather than only once every 10 years. The ACS data provides a continuous stream of updated information for states and local areas, and revolutionize the way we use data to understand our communities. Every year the ACS can support the release of single-year estimates for geographic areas with populations of 65,000 or more. Prior to 2005, ACS data included estimates for the household population only.⁷ The 2006 data-release marked the first time that group quarters populations such as prisons, college dorms, military barracks, and nursing home populations were included in the ACS data products. In 2009, the ACS accumulated samples over five-year intervals to produce estimates for smaller geographic areas including census tracts and block groups.⁸ This report uses 2005 to 2009 ACS five-year estimates, which were based on data collected between January 2005 and December 2009. In 2005, the ACS collected information from approximately 3 million addresses in the U.S. and 36,000 addresses in Puerto Rico. In 2009, it also included approximately 200,000 people living in group quarters.⁹

⁷<http://www.census.gov/acs/www/Downloads/ACS/accuracy2009.pdf>

⁸<http://www.census.gov/acs/www/Downloads/tp67.pdf>

⁹http://www.census.gov/acs/www/UseData/sse/sam/sam_def.htm

Table 2 shows ACS sample sizes for Nebraska since 2000.¹⁰ The number of the initial addresses selected for housing units and group quarters population was the 12 month sample for the American Community Survey. The number of the final interviews was the actual sample that was used to produce all weighted estimates for the survey year.

Table 3: ACS Sample Sizes for Nebraska, 2000-2009

Year	<u>Housing Units</u>		<u>Group Quarters People</u>	
	Initial Addresses Selected	Final Interviews	Initial Sample Selected	Final Interviews
2009	23,367	16,374	1,334	1,008
2008	24,677	17,526	1,192	1,008
2007	24,841	17,694	1,195	1,016
2006	25,254	18,307	1,252	1,036
2005	25,458	18,002	N/A	N/A
2004	11,076	8,108	N/A	N/A
2003	10,993	8,210	N/A	N/A
2002	10,046	7,557	N/A	N/A
2001	14,931	11,357	N/A	N/A
2000	15,154	11,164	N/A	N/A

Notes:

Housing Units Initial Addresses Selected - The number of addresses in Nebraska that were selected for the ACS sample for a particular year.

Housing Units Final Interviews - The final number of interviews across all three modes of data collection for the ACS in a given year for the state. This number includes occupied and vacant housing units that were interviewed by mail, telephone, or personal visit methods between January 1 and December 31.

Group Quarters People Initial Sample Selected - The number of people living in group quarters that could be contacted for ACS interviewing in a given year for the nation and by state.

Group Quarters People Final Interviews - The final number of person interviews for the ACS for those living in group quarters in a given year for the nation and by state.

¹⁰ http://www.census.gov/acs/www/acs-php/quality_measures_sample_2009.php

The ACS provides critical information about the characteristics of local communities; it was not designed to count the population; other sources of population counts, like the U.S. Census Bureau's Population Estimates Program, should be used. The Population Estimates Program produces the official estimates for population, age, sex, race, and Hispanic origin for the nation, states, and counties.

In this report, the terms "Hispanic" and "Latino" were used to refer to all individuals who reported they were Hispanic or Latino and the term "non-Hispanic White" was used to refer to the White-alone, not Hispanic population. The text of this report compares the population and housing characteristics for the minority population with those of the White not Hispanic population. Information on demographic, social, economic, and housing characteristics in the tables and figures were based on data from the 2005-2009 ACS Detailed Tables.

Further information from the ACS 2005 to 2009 was available from the American Fact Finder on the census bureau's website. More than 1,000 tables were available, including population profiles for race, Hispanic-origin, and ancestry groups.

The congressional district boundaries for the current 113th Congress are different than the 111th congressional district boundaries used in this report. An updated version, based on the 113th congressional district boundaries, using Census Bureau ACS 2008-2012, five-year estimates is a work in progress.

Thank you to Sara Horner, Program Analyst, for editing. Finally, thank you to Jeff Armitage for his final review.

CD 3 Hispanic Origin by Race

Individuals who were not Hispanic or Latino made up about 92% of the total population of CD 3, while only about 8% of the population in this area considered themselves to be Hispanic or Latino. Of those who were not Hispanic, 96.9% of those were White. Of those who were Hispanic, 58.7% of those were White, while 33.5% of Hispanics reported being some other race.

Table 4: Hispanic or Latino Origin by Race, 2005-2009

	Estimate	Percent of Total
Total:	552,636	
Not Hispanic or Latino:	506,436	91.6%
White alone	490,699	96.9%
Black or African American alone	2,907	0.6%
American Indian and Alaska Native alone	4,133	0.8%
Asian alone	3,409	0.7%
Native Hawaiian and Other Pacific Islander alone	128	0.03%
Some other race alone	250	0.05%
Two or more races:	4,910	1.0%
Two races including Some other race	164	0.03%
Two races excluding Some other race, and three or more races	4,746	0.9%
Hispanic or Latino:	46,200	8.4%
White alone	27,107	58.7%
Black or African American alone	252	0.5%
American Indian and Alaska Native alone	660	1.4%
Asian alone	2	0.004%
Native Hawaiian and Other Pacific Islander alone	102	0.2%
Some other race alone	15,468	33.5%
Two or more races:	2,609	5.6%
Two races including Some other race	2,031	4.4%
Two races excluding Some other race, and three or more races	578	1.3%

CD 3 Asian by Select Groups

The top five Asian subgroups found in CD 3 were Asian Indian, Chinese (including Taiwanese), Filipino, Korean, and Vietnamese. Over 27% of the Asians in CD 3 reported they were Vietnamese; this was almost 3 times the amount of Asian Indians in this community. There were similar amounts of those who reported being Filipino (13.5%) and Chinese (13%).

Table 5: Asian Alone by Select Groups

Asian Total, specified:	3,411
Asian Indian	337
Cambodian	23
Chinese, including Taiwanese	458
Filipino	462
Indonesian	32
Japanese	289
Korean	495
Laotian	186
Sri Lankan	17
Thai	46
Vietnamese	925
Other Asian	82
Other Asian, not specified	59

Figure 1: Top 5 Asian Alone Sub-Groups

Source: U.S. Census Bureau, 2005-2009 American Community Survey

Median Age

The Hispanic population of CD 3, like the state as a whole, had the lowest median age of every race and ethnicity with a median age of 23.1, while the median age for non-Hispanic Whites was the highest at 43 years. American Indians were slightly older than Hispanics and African Americans with a median age of 27.7.

Figure 2: Median Age

Source: U.S. Census Bureau, 2005-2009 American Community Survey

Median Age by Gender

Non-Hispanic Whites had the highest median age of any race or ethnicity for both genders. The median age for non-Hispanic White females was 44.4 while the median age for African American females was 20.2, making the median age for non-Hispanic White females more than twice the median age for African American females. The median age for non-Hispanic White males was 41.3 while the median age for Asian males was 23.9. Hispanics had the lowest overall median age at only 23.1 years old. Hispanics had the most similar median age between males and females with only 2.3 years separating men and women, while Asians had the largest disparity between males and females, with 10.6 years separating men and women.

Figure 3: Median Age by Gender

Source: U.S. Census Bureau, 2005-2009 American Community Survey

Marital Status

Only 27% of African Americans are married, compared to almost 60% of non-Hispanic Whites. Over half (53.5%) of African Americans in CD 3 have never been married; 12% of African Americans are divorced. Approximately 12% of American Indian and Alaska Natives are also divorced. Three percent of both Hispanics, African Americans, and American Indian and Alaska Natives are separated. Approximately thirty percent of Asians, Hispanics, and American Indian and Alaska Natives have never been married, compared to 21% of non-Hispanic Whites.

Figure 4: Marital Status

Source: U.S. Census Bureau, 2005-2009 American Community Survey

Transportation to Work

Workers were faced with several options when it comes to transportation to their place of employment. The most common means of transportation for every race and ethnicity was a car, truck, or van the worker drove alone. Non-Hispanic Whites had the highest percentage (77.5%) of those who drove their own vehicle alone to work, while African Americans had the lowest percentage (64.6%), but had the highest percentage (13.8%) of those who walked. Only 4.5% of non-Hispanic Whites walked to work. American Indians (13.7%) and Hispanics (23.1%) were most likely to carpool to work, while non-Hispanic Whites were least likely to carpool (9%). African Americans (0.9%), and American Indians and Alaska Natives (4.8%) were most likely to use public transportation. Only 0.2% of non-Hispanic Whites used public transportation.

Figure 5: Means of Transportation to Work

Source: U.S. Census Bureau, 2005-2009 American Community Survey

Notes: Workers include members of the Armed Forces and civilians who were at work last week. Data were for workers 16 and older.

'Work at home' not included in chart.

School Enrollment

African Americans (23%), Asians (42%), and non-Hispanic Whites (20.9%) have the highest proportion of children ages 3 years and older who were enrolled in school enrolled in college or graduate school, while Hispanics (8.8%) had the lowest proportion of students in college or graduate school.

Comparable to Nebraska as a whole, about 23% of Hispanics, 13% of Asians, and 28% of African Americans, aged 3 years and over who were enrolled in school were enrolled in high school; in comparison, 25.7% of non-Hispanic White students were enrolled in high school (grades 9-12). Over 46% of Hispanics and American Indian students aged 3 years and above were enrolled in elementary school (grades 1 to 8), which was higher than non-Hispanic Whites (about 42%) aged 3 years and over.

Figure 6: School Enrollment by Level of School

Source: U.S. Census Bureau, 2005-2009 American Community Survey

Note: Data were for those 3 years and older.

Educational Attainment

Approximately half (50.5%) of Hispanics in CD 3 had less than a high school education, compared to 8.7% of non-Hispanic Whites. A quarter of both American Indian/Alaska Natives (25.4%) and African Americans (22%) had less than a high school education. Approximately 65% of both AI/ANs (65%) and African Americans (63.9%) had a high school diploma, some college, or an associate's degree, compared to 71.2% of non-Hispanic Whites; around 44% of Hispanics and Asians (43.7%) can say the same. Asians saw the largest percentage of people with a bachelor's degree or higher, where only 5.5% of Hispanics and 9.6% of American Indian/Alaska Natives had a bachelor's degree or higher.

Figure 7: Education Attainment for Ages 25 and Older

Source: U.S. Census Bureau, 2005-2009 American Community Survey

Note: Data were for those 25 years and older.

Educational Attainment by Gender

Non-Hispanic Whites had the lowest proportion of a less than high school educated population (about 9% for male and about 8% for female) among all racial and ethnic groups. Asians had the largest proportion of a bachelor's degree or higher educated population (about 44% for male and 32% for female); both of these groups saw an even larger proportion statewide (55.6% and 47%, respectively). Non-Hispanic Whites and Hispanics had a lower proportion of females than males that were less than high school graduates. Like Nebraska as a whole, Asians in CD 3 had the largest gender disparity in terms of those with less than a high school education (about 13% for male and about 24% for female). Hispanic and African American females (about 7% and 18%) had a higher proportion of a bachelor degree or higher educated population than males (about 5% and 11%).

Figure 8: Educational Attainment by Gender for Ages 25 and Older

Source: U.S. Census Bureau, 2005-2009 American Community Survey

Note: Data were for those 25 years and older.

Poverty Status by Race/Ethnicity

Income in the Past 12 Months Below the Poverty Level

African Americans and American Indian and Alaska Natives experience similar levels of poverty in CD 3, at 32.4% and 31.1%, respectively. Twenty-three and one half percent of Hispanic or Latinos were living in poverty. Finally, a similar 11.3% of Asians and 10.6% of non-Hispanic Whites were living in poverty in CD 3.

Figure 9: Income in the Past 12 Months below the Poverty Level

Source: U.S. Census Bureau, 2005-2009 American Community Survey

*Note: Chart illustrates those who are below 100% of the federal poverty level.

Poverty Status by Family Type

The poverty status by family type data was separated into 3 groups: all families, married-couple families, and female householders, with no husband present.

Income in the Past 12 Months: Below the Poverty Level

In CD 3, a comparable 28.4% of American Indian and Alaska Native families and 28.3% of African American families live in poverty, compared to 7.1% of non-Hispanic Whites. Thirteen percent of Hispanic married-couple families were living in poverty, compared to 4% of non-Hispanic Whites. Almost 12% (11.6%) of American Indian and Alaska Native married-couples were living in poverty. African American female householders with no husband present see the largest proportion of the population living in poverty at 82.7%, compared to 28.6% of non-Hispanic Whites. Approximately 57% (57.1%) of American Indian and Alaska Native female householders live in poverty in CD 3.

Figure 10: Poverty Status by Family Type

Source: U.S. Census Bureau, 2005-2009 American Community Survey

Median Household Income

Household income includes all people's income who occupy a housing unit. In CD 3, the median income of Asian households in the 12 months prior to being surveyed was \$49,808, which was the highest among any racial or ethnic group; this was about \$6,500 higher than the median income of non-Hispanic White households in CD 3, but almost \$10,000 less than the state's Asian population. African American households had the lowest median income (\$21,294), which was \$5,000 less than the state's African American population, followed by American Indians (\$28,056).

Figure 11: Median Household Income in the Past 12 Months

Source: U.S. Census Bureau, 2005-2009 American Community Survey

Median Family Income

The median family income for non-Hispanic Whites and Asians was very similar, both around \$55,000, although Asians were slightly higher at \$56,951. The median family income for American Indians was much lower at \$31,267, making the non-Hispanic White median family income almost 2 times higher. African Americans and Hispanics had comparable median family incomes with African Americans bringing in \$36,071 and Hispanics making \$36,617.

Figure 12: Median Family Income in the Past 12 Months

Source: U.S. Census Bureau, 2005-2009 American Community Survey

Median Earnings by Gender

Non-Hispanic White males had the highest median earnings for males of every race and ethnicity. Asians had the smallest gender disparity, with about \$5,700 separating the median earnings between males and females. African Americans had the lowest total median earnings with \$12,318, almost \$12,000 less per year than non-Hispanic Whites. A larger racial disparity was found when looking at the median earnings for gender. Asian females made \$29,173 while American Indian females only made \$15,890. Non-Hispanic White males made \$36,658 while Hispanic males only made \$27,468.

Figure 13: Median Earnings by Gender in the Past 12 Months

Source: U.S. Census Bureau, 2005-2009 American Community Survey

Note: Data were for those who worked full-time, year-round in the past 12 months; those with 'other' types of employment were not included; quantities were 2009 inflation-adjusted dollars

Employment Status

Almost 13% of the African American population was unemployed in CD 3, compared to 3% of non-Hispanic Whites. African Americans also saw the lowest proportion of those employed, 53.3% compared to 79.7% of non-Hispanic Whites. Approximately 8.5% of American Indian and Alaska Natives were unemployed, and saw similar rates of employment as African Americans (56%). American Indian and Alaska Natives also saw the highest proportion of people not in the labor force (35.6%).

Figure 14: Employment Status, ages 16 to 64

Source: U.S. Census Bureau, 2005-2009 American Community Survey

Note: Data was for those over 16 and under the age of 64, those 65 and older were not included.

Employment Status by Gender

Non-Hispanic White males had the highest percentage (83.2%) who were civilian employed, while African Americans had the lowest percentage (59.1%) of males who were civilian employed. Hispanics had the highest percentage (0.3%) of those who were in the armed forces. Non-Hispanic Whites had the lowest percentage of those who were not in the labor force. American Indians were about 2.5 times more likely and African Americans were 5 times more likely than non-Hispanic Whites to be civilian unemployed.

Figure 15: Employment Status for Males, ages 16 to 64

Source: U.S. Census Bureau, 2005-2009 American Community Survey

Note: Data was for those over 16 and under the age of 64, those 65 and older were not included.

Non-Hispanic White females had the highest percentage (76%) of those who were civilian employed, while Asians had the lowest percentage (1.9%) of those who were civilian unemployed. African American females were more than 3 times as likely to be unemployed than non-Hispanic White females. African Americans also had the lowest percentage (47.2%) of females who were civilian employed and the highest percentage (43.3%) of females not in the labor force. The only females in CD 3 in the armed forces were non-Hispanic White.

Figure 16: Employment Status for Females, ages 16 to 64

Source: U.S. Census Bureau, 2005-2009 American Community Survey

Note: Data was for those over 16 and under the age of 64, those 65 and older were not included.

Household Type

Each household contains a different family dynamic that makes that family unique. Similar to the bigger Nebraska picture, Hispanic (52.6%) and non-Hispanic White (55.9%) families had the highest percentage of households with a married couple family. Unlike Nebraska (63%), only 50% of Asian households were maintained by married couples in CD 3. To that end, only 24.7% of African American and 42.9% of American Indian and Alaska Native households contained a married couple family.

A higher percentage of African American (17.3%), American Indian (22%), and Hispanic or Latino households (17.1%) were families maintained by a woman with no husband present than non-Hispanic White households (7.2%); compared to the state that saw 31% of African American homes and 28% of American Indian homes maintained by a woman with no husband present. A higher proportion of minority households (5-12%) than non-Hispanic White households (about 2.8%) were families maintained by a man with no wife present.

Figure 17: Household Type

Source: U.S. Census Bureau, 2005-2009 American Community Survey

Housing Tenure

Nebraska minority households had a smaller proportion of the population who lived in owner-occupied homes than non-Hispanic White households. In CD 3, Asian households had the highest percentage of owner-occupied homes (about 64%), while African American households were the lowest (about 22%); compared to the state population at 58% and 34%, respectively. In comparison, about 73% of non-Hispanic White households were owner-occupied homes. African Americans were about 3 times as likely as non-Hispanic Whites to rent their residence.

Figure 18: Tenure for Occupied Housing Units

Source: U.S. Census Bureau, 2005-2009 American Community Survey

Note: Housing tenure was shown by the race and Hispanic origin of the householder.

Occupants per Room

American Indian households (13.2%) and Hispanics (13.4%) were most likely to have more than one occupant per room, while non-Hispanic Whites (0.8%) were least likely to have more than one occupant per room. American Indian and Hispanic households were both about 16 times more likely than non-Hispanic Whites to have more than one occupant per room. African American and Asian households were both about eight times more likely than non-Hispanic Whites to have more than one occupant per room.

Figure 19: Occupants per Room

Source: U.S. Census Bureau, 2005-2009 American Community Survey

Note: Caution should be used when comparing data for Occupants per Room between 2008 and 2009. A data collection error was identified for 2008 impacting the "1 room" category.

Units in Structure

Non-Hispanic Whites had the largest percentage of those who lived in a single unit structure (83.9%), while African Americans had the smallest percentage of those who lived in a single unit structure (36.9%) but had the largest percentage of those who lived in a 2 to 9 unit building (18.6%). American Indians, Asians, and Hispanics had the highest percentages (9%, 8%, and 17.1%, respectively) of those who reported living in a mobile home in CD 3. African Americans were most likely to live in larger apartment complexes containing 10 units or more (33.3%).

Figure 20: Units in Structure

Source: U.S. Census Bureau, 2005-2009 American Community Survey

Note: Single unit structures include both attached and detached units. Those living in a boat, RV, van, etc were not included.

Geographic Mobility

Different races within CD 3 had different patterns of geographic mobility in the past year. Asians (80.6%) and non-Hispanic Whites (85.2%) were most likely to have been in their current residence a year prior to the survey. African Americans (18.9%) were two times more likely than non-Hispanic Whites (8.4%) to have moved within the same county. About 14% of African Americans had moved from a different county within the same state while only 4.1% of non-Hispanic Whites, 7.4% of Asians, and 6.5% of American Indians had moved from a different county within the same state. African Americans were almost 6 times more likely than non-Hispanic Whites to have moved to their current residence from a different state. Asians were 49 times more likely than non-Hispanic Whites to have moved from abroad in the past year. Almost 1% of Hispanics had moved from abroad, while only 0.1% of non-Hispanic Whites had moved from abroad.

Figure 21: Geographic Mobility in the Past Year

Source: U.S. Census Bureau, 2005-2009 American Community Survey

Note: This table provides geographical mobility for persons relative to their residence at the time they were surveyed. The characteristics crossed by geographical mobility reflect the current survey year.

Place of Birth

Place of birth varied greatly between each racial and ethnic group in CD 3. Non-Hispanic Whites had the highest percentage (76.6%) of those who were born in Nebraska at the time they were surveyed. Non-Hispanic Whites were almost 4 times more likely to be born in Nebraska than Asians. Asians had the highest percentage of those who were foreign born (73.2%). American Indians and African Americans had very similar proportions of those who were born in Nebraska (37.7% for American Indians and 35.1% for African Americans). Non-Hispanic Whites and Hispanics had very similar proportions of those who were born in another state in the United States (22.5% for non-Hispanic Whites and 23.5% for Hispanics). About 37% of Hispanics were foreign born while 38.6% were born in Nebraska.

Figure 22: Place of Birth by Race in the United States

Source: U.S. Census Bureau, 2005-2009 American Community Survey

Citizenship Status

Most people (95.5%) who reside in CD 3 reported that they were a United States citizen and were born in the United States. About 3% of people reported they were not a United States citizen. Since these numbers were self-reported there was reason to believe these numbers may not be completely accurate since some may fear reporting their citizenship status. Only about 1% of those surveyed reported they were a United States citizen by naturalization. These citizenship numbers were very comparable to state of Nebraska numbers. Less than 1% were United States citizens born abroad to American parents or born in Puerto Rico or another U.S. island area.

Table 7: Citizenship Status

Citizenship Status	Number	Percent
U.S. citizen, born in the United States	527,488	95.5
U.S. citizen, born in Puerto Rico or U.S. Island Areas	320	0.1
U.S. citizen, born abroad of American parent(s)	1,931	0.4
U.S. citizen by naturalization	6,758	1.2
Not a U.S. citizen	16,139	2.9
Total:	552,636	

Source: U.S. Census Bureau, 2005-2009 American Community Survey

Year of Entry

According to this data, there seems to have been a boom in immigration after 1990. More than twice the amount of people reported entering the United States after 1990 as they did before 1990. About 35% of those who entered the U.S. reported they entered between 1990 and 1999, while only about 17% said they entered between 1980 and 1989. There has been a slight decrease in the number of those entering the U.S. (in CD 3) in recent years with only about 32% reporting they entered after the year 2000.

[1] Other Asian alone, or two or more Asian categories.

[2] Other Pacific Islander alone, or two or more Native Hawaiian and Other Pacific Islander categories

[3] One of the four most commonly reported multiple-race combinations nationwide in Census 2000

[4] In combination with one or more of the other races listed. The six numbers may add to more than the total population, and the six percentages may add to more than 100 percent because individuals may report more than one race.

[5] This category was composed of people whose origins were from the Dominican Republic, Spain, and Spanish-speaking Central or South American countries. It also includes general origin responses such as "Latino" or "Hispanic."

[6] "Spouse" represents spouse of the householder. It does not reflect all spouses in a household. Responses of "same-sex spouse" were edited during processing to "unmarried partner."

[7] "Family households" consist of a householder and one or more other people related to the householder by birth, marriage, or adoption. They do not include same-sex married couples even if the marriage was performed in a state issuing marriage certificates for same-sex couples. Same-sex couple households were included in the family households category if there was at least one additional person related to the householder by birth or adoption. Same-sex couple households with no relatives of the householder present were tabulated in nonfamily households. "Nonfamily households" consist of people living alone and households which do not have any members related to the householder.

[8] The homeowner vacancy rate was the proportion of the homeowner inventory that was vacant "for sale." It was computed by dividing the total number of vacant units "for sale only" by the sum of owner-occupied units, vacant units that were "for sale only," and vacant units that have been sold but not yet occupied; and then multiplying by 100.

[9] The rental vacancy rate was the proportion of the rental inventory that was vacant "for rent." It was computed by dividing the total number of vacant units "for rent" by the sum of the renter-occupied units, vacant units that were "for rent," and vacant units that have been rented but not yet occupied; and then multiplying by 100.

Source: U.S. Census Bureau, 2010 Census.

Note: These values were based on 111 Congressional District

Glossary of Terms¹¹

Average Household Size: A measure obtained by dividing the number of people in households by the number of households. In cases where people in households were cross-classified by race or Hispanic origin, people in the household were classified by the race or Hispanic origin of the householder rather than the race or Hispanic origin of each individual. Average household size is rounded to the nearest hundredth.

Disability Status: The census bureau defines disability as a long-lasting sensory, physical, mental, or emotional condition or conditions that make it difficult for a person to do functional or participatory activities such as seeing, hearing, walking, climbing stairs, learning, remembering, concentrating, dressing, bathing, going outside of the home, or working at a job.

Fertility: Data is most frequently presented in terms of the aggregate number of women aged 15 to 50, who had a birth in the past 12 months in the specified category and in terms of the rate per 1,000 women.

Foreign-Born Population: The foreign-born population includes anyone who is not a U.S. citizen or a U.S. national at birth. This includes respondents who indicated they were a U.S. citizen by naturalization or not a U.S. citizen.

Group Quarters (GQ): Group quarters were places where people live or stay that were normally owned or managed by an entity or organization providing housing and/or services for the residents. These services may include custodial or medical care as well as other types of assistance. Residency is commonly restricted to those receiving these services. People living in group quarters were usually not related to each other. Group quarters include such places as college residence halls, residential treatment centers, skilled nursing facilities, group homes, military barracks, correctional facilities, and workers' dormitories.

Household: A household includes all the people who occupy a housing unit. (People not living in households were classified as living in group quarters.) A family household consists of a householder and one or more individuals living together in the same household who were related to the householder by birth, marriage, or adoption. It may also include people unrelated to the householder. The occupants may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated people who were sharing living arrangements.

Householder: The person, or one of the people, in whose name the home is owned, being bought, or rented.

Housing Unit: A housing unit may be a house, an apartment, a mobile home, a group of rooms or a single room that is occupied (or, if vacant, intended for occupancy) as separate living

¹¹ <http://www.census.gov/acs/www/UseData/Def.htm>

quarters. Separate living quarters were those in which the occupants live separately from any other individuals in the building and which have direct access from outside the building or through a common hall. For vacant units, the criteria of separateness and direct access were applied to the intended occupants whenever possible. If that information cannot be obtained, the criteria were applied to the previous occupants.

Labor Force Participation Rate: The labor force participation rate represents the proportion of the population that is in the labor force. For example: if there were 100 people in the population 16 years and over and 64 of them were in the labor force, then the labor force participation rate for the population 16 years and over would be 64%.

Labor Force: All people classified in the civilian labor force plus members of the U.S. Armed Forces which include people on active duty in the United States Army, Air Force, Navy, Marine Corps, or Coast Guard.

Not in Labor Force: All people 16 years old and over who were not classified as members of the labor force. This category consists mainly of students, housewives, retired workers, seasonal workers that were interviewed in an off season who were not looking for work, institutionalized people, and people doing only incidental unpaid family work of less than 15 hours of work during the reference week.

Poverty: Following the Office of Management and Budget's Directive 14, the census bureau uses a set of money income thresholds that vary by family size and composition to detect who is poor. If the total income for a family or unrelated individual falls below the relevant poverty threshold, then the family or unrelated individual is classified as being "below the poverty level".

Unemployment Rate: The unemployment rate represents the number of unemployed people as a percentage of the civilian labor force. For example: if the civilian labor force equals 100 people and 7 people were unemployed, then the unemployment rate would be 7%.
